

Nguyễn Văn Trung

Backend Developer

Profile

- 0348834634
- nvtqx1@gmail.com
- <https://github.com/nvtqx1>
- Ha Noi, Vietnam

Skills

Programming Languages:

Java (Primary), JavaScript (Basic)

Backend & Frameworks:

Spring Boot, RESTful API, Spring Security (JWT)

Databases: MySQL, MongoDB, Neo4j (Graph DB)

Infrastructure & Tools:

IntelliJ IDEA, Git, Postman, Docker, Docker Compose, Maven

Interests

- Backend development and scalable system design
- Exploring new technologies
- Problem solving
- Playing sports

Languages

- English: Working proficiency

Summary

Computer Science student at UET - VNU seeking an internship opportunity to gain practical experience in software development, with a strong interest in Java backend development. Motivated to learn, improve technical and problem-solving skills, and work effectively in a team environment. Possess a solid understanding of backend fundamentals, including RESTful API design, database management, and system logic using Java and Spring Boot. Looking to grow step by step in a professional setting and build a strong foundation for a long-term career as a software engineer.

Education

University of Engineering and Technology | UET - VNU

2023 - Present

Computer Science

GPA: 3.0 / 4.0

Projects

Backend Developer

04/2026 - Present

Smart Lab Management & Coordination System | Individual Project

<https://github.com/nvtqx1/Lab-Portal>

Technologies: React, Java Spring Boot, MySQL, Redis, Kafka, Spring Security, Docker.

- Developed a full-stack lab management system with **AI-powered FaceID check-in** and an intelligent chatbot for automated user support and resource allocation.
- Designed a **high-concurrency scheduling engine** using Redis and MySQL, reducing booking conflicts and handling peak-time loads efficiently.
- Implemented **event-driven automation** (Kafka, Spring Scheduler) to enforce *No-Show penalties* and dynamically promote users from waiting lists.
- Secured RESTful APIs with **Spring Security (JWT)**, supporting fine-grained **role-based access control (RBAC)**.
- Containerized the system using **Docker Compose** for consistent and scalable deployment.

Backend Developer

03/2026 - Present

MovieTicket – Ticket Booking System | Team Project

<https://github.com/nvtqx1/MovieTicket>

Technologies: Java, Spring Boot, MySQL, Redis, Kafka, WebSocket

- Built a **real-time ticket booking system** using Java Spring Boot to handle concurrent user reservations
- Designed RESTful APIs and implemented **JWT-based authentication** with Spring Security
- Developed **event-driven seat booking flow** using **Apache Kafka** to manage high-traffic requests
- Applied **pessimistic locking (MySQL)** and **Redis TTL** to prevent double booking and manage seat lifecycle
- Enabled **real-time seat synchronization** across clients using WebSocket (STOMP)
- Containerized system services with Docker Compose for consistent development and deployment
